SUMMARY

Results-driven Software Development Engineer with 2+ years of experience developing enterprise-grade backend applications using **Java, Spring Boot, C++**, and **Node.js**. Skilled in designing **RESTful APIs**, microservices, and scalable solutions with a strong focus on performance, clean architecture, and code quality. Experienced in delivering reliable software and business-critical features in Agile environments. Passionate about building efficient, scalable systems that drive business impact.

TECHNICAL SKILLS

- **Languages:** *Java, C++, JavaScript, Typescript, Python*
 - **Frameworks:** *Spring Boot, Node Js, Angular, React.js, Express.js*
 - **Software Design & Practices:** *System Design, Microservices, REST APIs, OOP, Agile, Scrum*
 - **Cloud:** *AWS (Lambda, EC2, S3, API Gateway)*
 - **OS & Databases:** *MongoDB, MySQL, Redis, Linux*
 - **DevOps & CI/CD:** *Docker, Kubernetes, Jenkins*
 - **Tools:** *Webpack, Mocha, Chai*
 - **Version Control:** *Git, GitLab, GitHub*
-

WORK EXPERIENCE

Software Development Engineer II - Darwinbox Digital Solutions **Mar 2026 - Present**

- Designed and implemented scalable microservices and **RESTful APIs** using **Java, Spring Boot, Node.js**, and **TypeScript**, delivering robust enterprise onboarding and reporting capabilities.
 - Led the backend implementation of the Report Web View feature, driving a **37%** increase in report adoption by eliminating dependency on manual report downloads.
 - Optimized backend services, database queries, and API performance, improving application scalability, reducing response times, and enabling efficient handling of concurrent requests.
 - Enhanced onboarding workflows and backend integrations, reducing onboarding-related support issues by **20%** through workflow automation and streamlined data processing.
 - Resolved critical production issues, optimized business logic, and implemented performance improvements, enhancing application reliability and ensuring seamless user experience.
 - Built robust exception handling, input validation, and centralized logging mechanisms, reducing production defects and improving system stability and maintainability.
-

Software Development Engineer I - Darwinbox Digital Solutions **Feb 2024 - Mar 2026**

- Developed secure backend services and REST APIs using **Spring Boot, Express.js**, and **MongoDB** for onboarding workflows, authentication, and employee management systems.
- Designed scalable database schemas and backend modules to streamline data retrieval and improve maintainability.
- Implemented authentication and authorization workflows using secure access control mechanisms.
- Participated in **API integration, backend optimization, debugging**, and feature enhancement activities across enterprise HR platforms.
- Worked in Agile development environments with code reviews, sprint planning, and collaborative feature delivery processes.

PROJECTS

Employee Leave & Attendance Management System

Java, Spring Boot, Angular, TypeScript, REST APIs, JWT, Maven

- Developed a scalable Employee Leave & Attendance Management System using **Java Spring Boot** and Angular, enabling seamless leave management, attendance tracking, and approval workflows.
- Designed and developed **15+ RESTful APIs** for employee management, leave requests, attendance records, and approval processes following RESTful best practices.
- Implemented Spring Security with JWT-based authentication and role-based authorization to provide secure access for Admin, Manager, and Employee roles.
- Optimized backend services and MySQL queries, improving API response times by **35%** and enhancing overall application performance.
- Built responsive dashboards and automated approval workflows, reducing manual HR effort by 50% and improving leave approval turnaround time by **40%**.
- Supported 500+ employees by digitizing leave and attendance operations, reducing processing errors by 60% and significantly improving operational efficiency.

Live Streaming Platform — Full Stack

Spring Boot, React.js, Node.js, Express.js, MongoDB, AWS IVS

- Designed and developed a scalable live streaming platform supporting secure authentication, concurrent streaming sessions, and virtual event management.
- Built backend microservices and REST APIs using **Spring Boot and Node.js** for event scheduling, user management, and streaming workflows.
- Integrated **AWS Interactive Video Service (IVS)** for secure low-latency live streaming and real-time playback support.
- Developed reusable frontend components using React.js to improve UI consistency and scalability.
- Implemented scalable backend architecture and database models to efficiently handle concurrent users and streaming operations.

ACHIEVEMENTS AND CONTRIBUTIONS

- Recognized for improving system performance, scalability, and reliability through architectural optimizations.
- Achieved a **37%** increase in report usage by implementing a Report Web View feature, enabling clients to access reports seamlessly without the need for manual downloads.

EDUCATION

B.Tech in Computer Science and Engineering

Sree Vidyanikethan Engineering College
Tirupati, Andhra Pradesh

Jan 2021 - May 2024

CGPA: 9.1/10
